DETAILED ACTION

Claims 12-21 and 29-38 are pending in this application which is an RCE of Serial Number 09/765919.

The amendment dated 3/11/03, previously unentered, has been entered. Amended claims 29-30, 32 are noted.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 12-21 and 29-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Basham et al. (5,142,483). Basham discloses a pressure regulating system which includes a pressurized gas source, an inlet regulator 28 of conventional design supplying gas to an inlet 29 of a pressure controller which includes an inlet servo-valve 30 that feeds inlet gas into a manifold 23 (col.1 lines 21-37). More than one gas can be utilized (col.5 lines 11-26 and col.5 line 66 - col.6 line 19). However, the reference remains silent as to mixing gases in a gas manifold.

Art Unit: 1762

It is noted that a gas manifold contains more than one gas. The skilled artisan knows that a gas manifold can be utilized to mix gases. It would have been obvious to utilize same with the expectation of obtaining a mixed gas.

The limitations of claims 13-19, 21, 37-38 have been addressed above.

In claim 20, the applicant requires the use of a gas cabinet. It is well known to store gas sources in a gas cabinet for safety and organizational reasons. It would have been obvious to utilize a gas cabinet for the reasons indicated above.

In claims 29-34, the applicant requires setting a flow rate. This would be inherent in the use of regulators. Hence, it is the examiner's position that the limitation reads on the cited reference.

The limitations of claims 35-36 have been addressed above.

Ferri, Jr. et al. (5,417,346), Moore et al. (5,601,107), and Moore et al. (5,417,236) have been provided for additional information.
